

# HOW TO INSTALL YOUR MAGNETIC SECONDARY GLAZING KIT

Helping to keep your property warmer  
this winter

## STEP 1. UNBOX

Remove your acrylic sheet from its packaging and double-check the sheet is the correct size for your window frame.

## STEP 2. PREPARE

Clean the window frame to make sure that it is free from any dirt or substance that can affect the magnetic strip.

## STEP 3. MEASURE

Take your cut to size sheet material out of the packaging and lay it down flat. Measure all sides of the sheet.

## STEP 4. CUT

Cut the magnetic tape according to the measurements of each side of the window. Cut two strips per side.

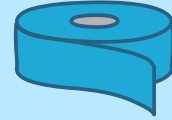

## STEP 5. ATTACH

Take your matching sized magnetic strips and place the two magnetic sides together to create a seal. Keep the two magnetic edges stuck together.

## STEP 6. PEEL & STICK

Remove the protective film on one side of the acrylic sheet. Peel off one side of the film on the magnetic strip. Stick the strip onto the edge of the acrylic leaving approx. 1 - 2cm's of space from the edge

## STEP 7. CHECK

Make a final check to ensure that the magnetic strips match up to the window frame.

## STEP 8. STICK

Peel off the other protective film on the magnetic strips and stick it onto the window frame. Make sure to press firmly on all of the edges of the acrylic.

## STEP 9. REMOVE

Finally, peel off the protective layer that is left on the acrylic sheet. Your magnetic secondary glazing kit is now installed.

## HINTS & TIPS

- Clean your window frame with a degreaser that does not contain any harsh chemicals as it may affect the acrylic
- The bigger the gap between the window and the acrylic sheet, the more effective it is
- Double-check that you are sticking the magnetic strips the right way. They should align perfectly with no gaps or bumps.
